

VOYAGER III PLUS

Increased refinement; **improved** comfort.

 **Belmont**

Perfecting the art of dentistry

belmontdental.co.uk

Our **Voyager III Plus** brings subtle improvements to enhance a familiar, trusted treatment centre.

This updated treatment centre brings all the best Voyager III features, **plus** an improved backrest cushion with extra lumbar support, a new headrest mechanism with smaller adjustment increments for finer patient positioning and an upgraded LED treatment light with an improved light output specification of 34,000 Lux; a ceiling mounted option is also available.

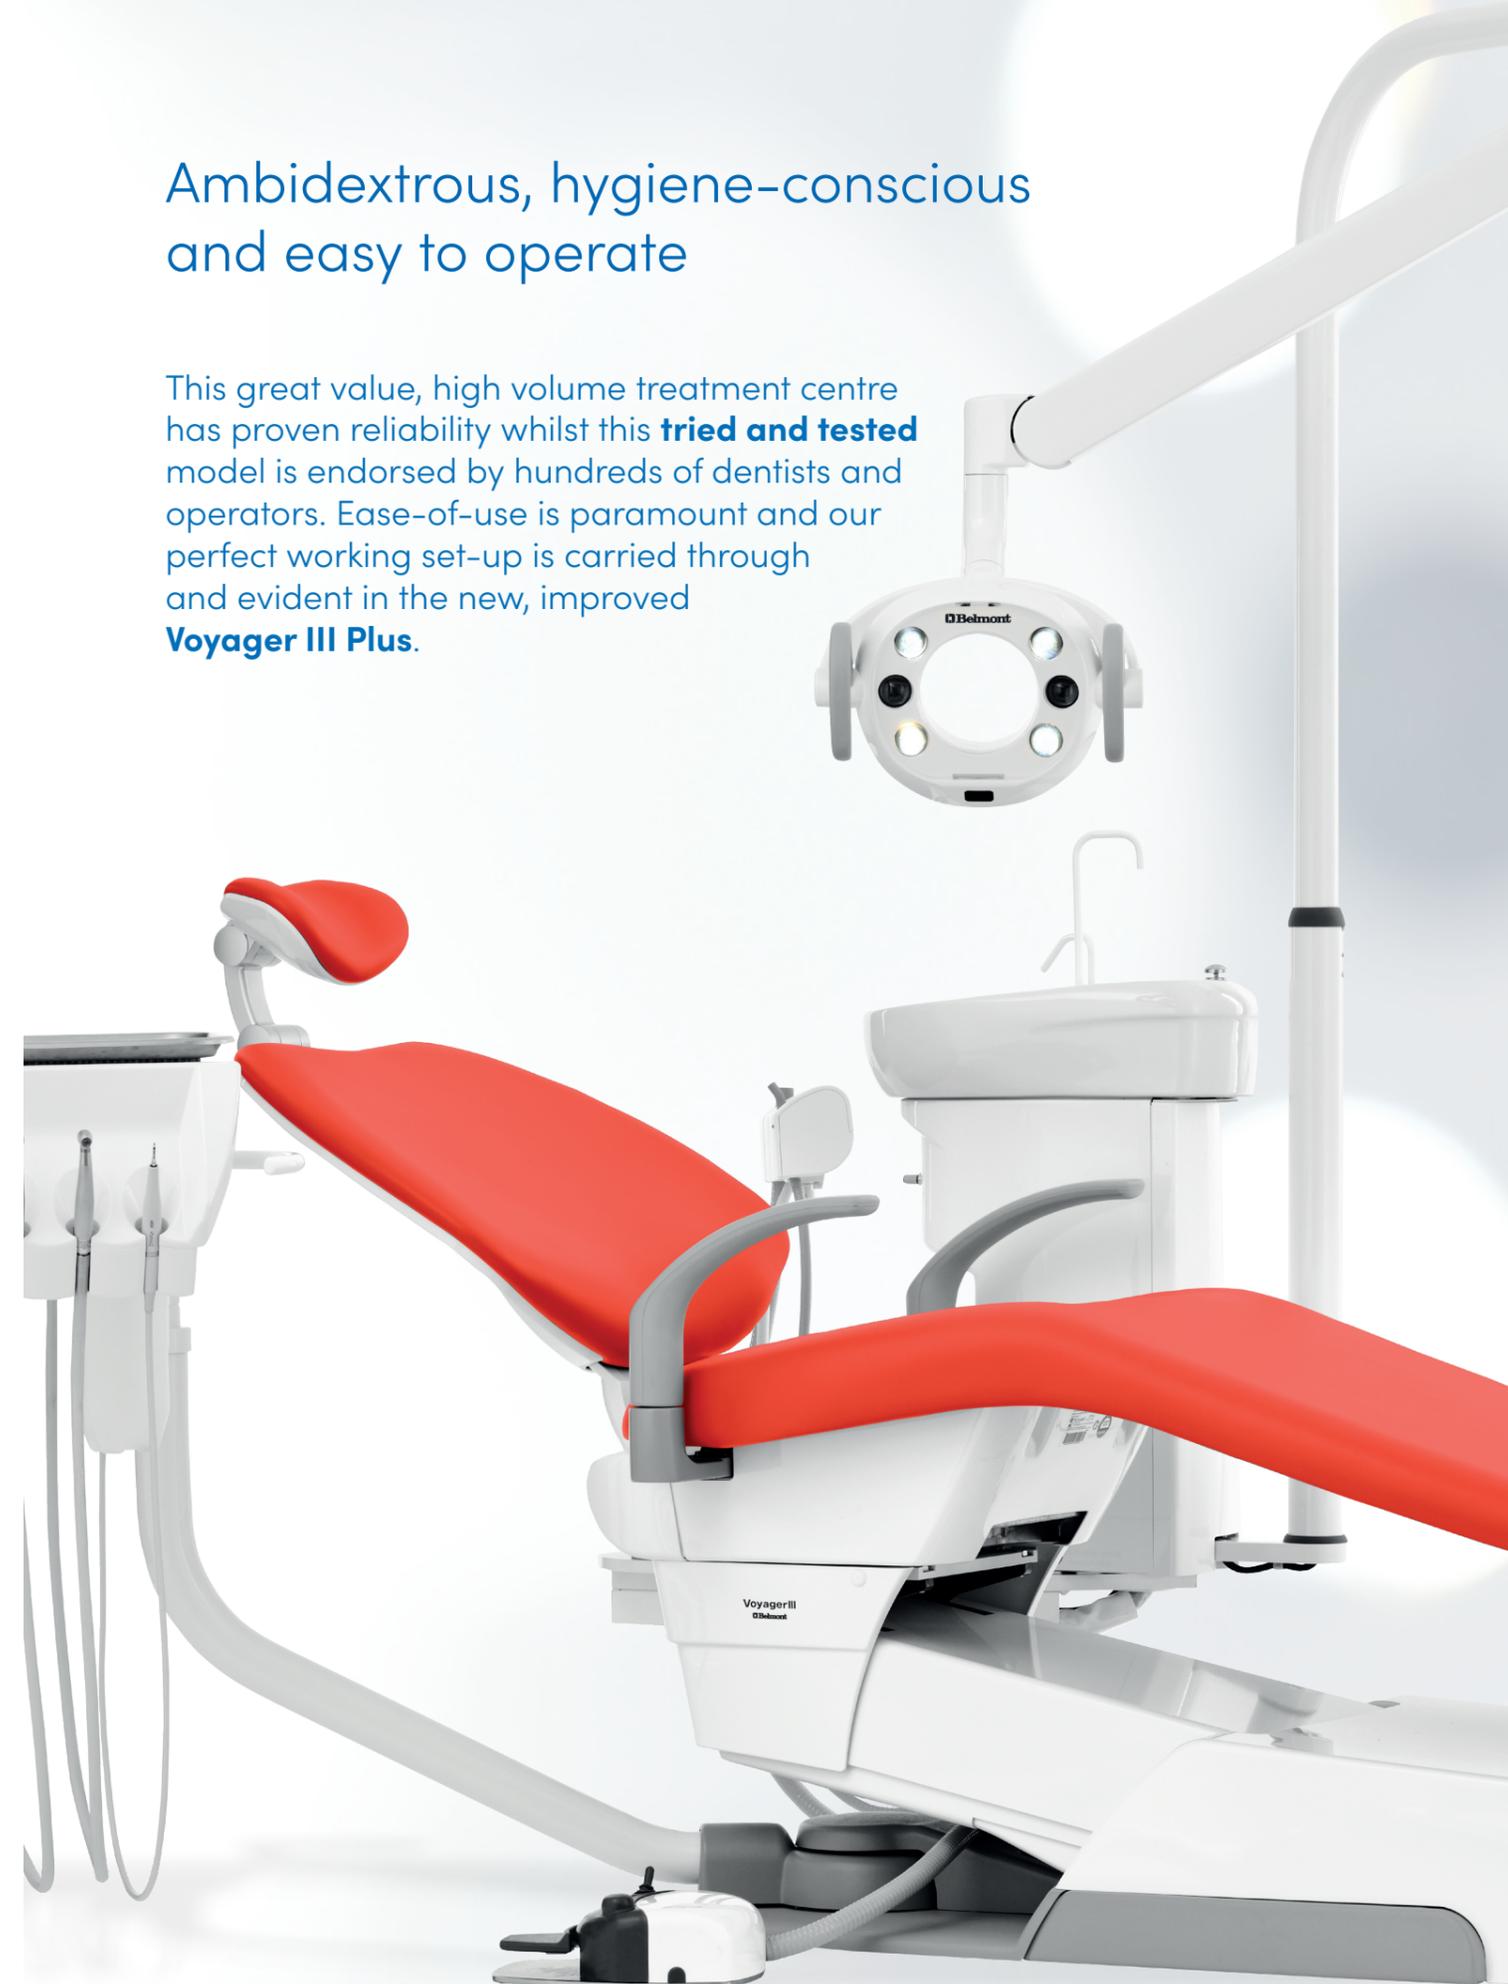

Designed and manufactured with great care, this ever-popular treatment centre now aligns with **contemporary dental expectations** and further **improves patient comfort**.

The central pivot design enables a very easy changeover procedure and provides 100% equality for left and right handed operators. The simplicity of this elegant solution also allows the table to be positioned behind a patient for discretion or cleaning and preparation.

Ambidextrous, hygiene-conscious and easy to operate

This great value, high volume treatment centre has proven reliability whilst this **tried and tested** model is endorsed by hundreds of dentists and operators. Ease-of-use is paramount and our perfect working set-up is carried through and evident in the new, improved **Voyager III Plus**.

Voyager III Plus

Ever popular, ambidextrous treatment centre

The epitome of operator friendliness, with left and right-handed compatibility, the simplicity of the Voyager III is well-renowned. Combine these attributes with hygiene-conscious qualities and you have a best-in-class treatment centre.

New Features:

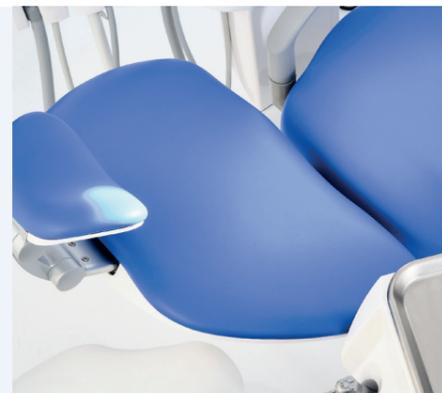

> New multi-positional twin-axis headrest

Improved comfort with the **new** twin-axis headrest system that can be fine-tuned in increments of 7.5 degrees across a wide spectrum, ensuring all patients from small children to tall adults are comfortable. By depressing the circular lock button on the side of the headrest, sliding the headrest vertically is an easy, smooth operation; whilst a gentle squeeze of the side mechanism allows fore & aft positioning for comfort during specific treatments.

> Redesigned backrest

An improved backrest brings increased length and lumbar support. Practical and comfortable, the new backrest is also easy to clean for effortless hygiene, plus a new white infill between the seat and backrest offers a smarter appearance and improved infection control (shown opposite).

> New LED operating light

The LED dental light has adjustable intensity control, composite cure safe mode and is operated with a touchless sensor. Triple axis head movement and intensity from 5,000 to 34,000 Lux reproduces natural light with functional colour rendering capacity. A zero drift counter-balance arm allows the operator to accurately position the light.

The perfect blend of style and function, the new headrest offers a multitude of heights and angles whilst added lumbar support to the backrest cushion further enhances patient comfort.

Intensity control, composite cure safe mode, simple to detach autoclavable handles and one-piece removable clear lens cover for easy cleaning.

IN TREATMENT MODE:
